1. General Description

LTM150XI-A01 is a new concept of System-On-Panel (SOP) display device. It provides total and high quality TFT-LCD display solutions for customer system design. Customer can use the high quality display unit just like an integrated circuit (IC).

As ICs are used as building blocks of many complicated electronic systems, this new display solution can be used just same.

This device includes the high quality TFT-LCD panel and the high brightness 4-lamp backlight unit with the optimized inverter. Integrated signal processing unit, named LSP (LCD Signal Processor™), includes all electronic function for user application. It includes analog-to-digital conversion, Scaling, OSD, EDID (DDC 2 compliance) and LCD Timing controller. More functions are available, also.

World-top notebook LCD design technology of Samsung realize the most compact solution. Customer can enjoy wide system design flexibility.

EMI is the additional point of this device. All of the units are shielded by metal case finally.

* Features

- High display quality : High contrast ratio, Wide-viewing angle and High-speed response time.
- High brightness with the 4-CCFL backlight lamps using optimized inverter.
- Samsung's own *Smart Inverter Control(SIC)* technology will be supported. (TBD)
- Standard interface: Analog RGB and Composite video input (YUV and S-VIDEO).
 - ※ Interface solution is shown in next page.
- On Screen Display(OSD): Samsung generic bitmap OSD is supported, but the customized OSD is also available using system development tool.
- Digital Image Processor is embedded with intelligent microprocessor.
- Wide Input Voltage Range : +9VDC ~ +20VDC
- DDC Ver. 2 Compliance by system integrator
- VESA DPMS compliance
- Low Power Consumption
- Easier EMI troubleshooting and solution supported.
- Easy Lamp replacement

* Information

Items	Specification	Unit	Note
Display area	304.1(H) x 228.1(V)	mm	15.0 inch diagonal
Driver element	a-Si TFT active matrix		
Display colors	16.7M (true)	colors	
Number of pixels	1024 x 768	pixel	
Pixel arrangement	RGB vertical stripe		
Pixel pitch	0.297(H) x 0.297(W)	mm	
Display mode	Normally White		
Surface treatment	Haze 25% , Hard-coating (3H)		
Lamp	4-Lamp

3. Environmental Specification

Items	Min.	Max.	Units	Note
Storage Temperature	-25	+60	°C	
Operating Temperature	0	+50	°C	
Shock (Non-operating)	-	50	G	11ms, 1 time for ±X, ±Y, ±Z
Vibration (Non-operating)	-	1.5	G	10-300Hz, Sweep rate:10min, 30min for X, Y, Z axis

■ Note: If this product is used for extended time excessively or exposed to high temperatures for extended time, there is a possibility of wide viewing angle film damage which could affect visual characteristics.

4. Optical Characteristics

The following items are measured under stable conditions. The optical characteristics should be measured

in a dark room or equivalent state with the methods shown in Note (1).

※Measuring equipment : TOPCON BM-5A: Contrast Ratio, Luminance of White, Viewing Angle

TOPCON BM-7: Response time, Flicker

Photo Research PR650: Color Chromaticity

※Ta = 25± 2℃ , VIN = +12V, fv= 60Hz, IL = 6.0mA

■ Measuring Condition: Maximum value of Brightness and Contrast in OSD menu.

■ Flicker must be controlled internally. Customer specification need to exclude this item.

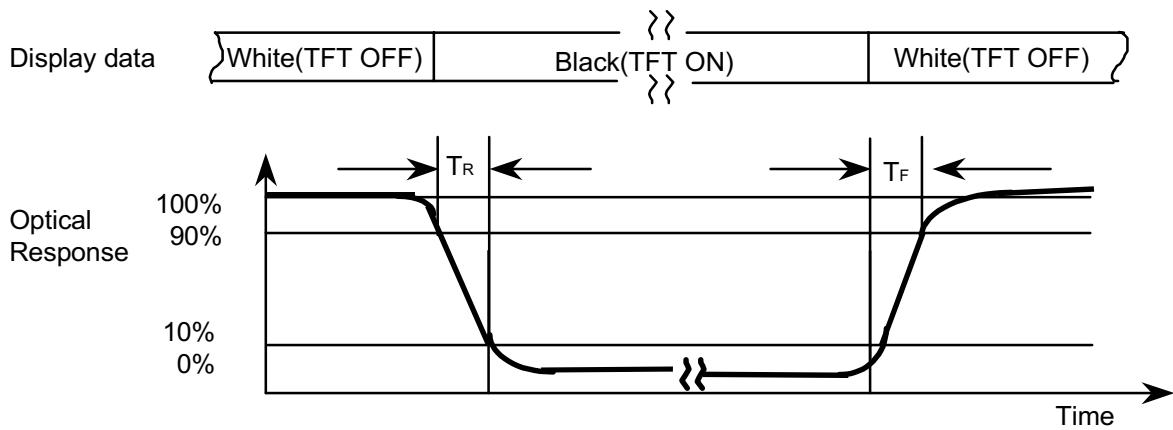

Note 1) Definition of Viewing Angle : Viewing angle range ($10 \leq CR$)

Note 2) Definition of Contrast Ratio (CR) : Ratio of gray max (Gmax) ,gray min (Gmin) at the center point of panel.

$$CR = \frac{\text{Luminance with all pixels white (Gmax)}}{\text{Luminance with all pixels black (Gmin)}}$$

Note 3) Definition of Response time : Sum of T_R, T_F

Note 4) After stabilizing and leaving the panel alone at a given temperature for 30 min , the measurement should be executed. Measurement should be executed in a stable, windless, and dark room. 30 min after lighting the back-light. This should be measured in the center of screen.
Lamp current : 6.0mA
Environment condition : $T_a = 25 \pm 2 \text{ }^\circ\text{C}$

Optical characteristics measurement setup

Note 5) Definition of 9 points brightness uniformity

$$B_{UNI} = \frac{|B_{max \text{ or } B_{min}} - B_{ave}|}{B_{ave}} \times 100$$

B_{max} : Maximum Brightness

B_{min} : Minimum Brightness

$$B_{ave} : \text{Average Brightness} = \frac{\sum_{k=1}^9 (B(k))}{9}$$

Note 6) Measuring Equipment: BM-7, Distance: 50cm

① Calculation Spec.: SG029300

② Measuring point

③ Pattern: 1dot pattern (Gray #21, #31, #44)

Note 7) Definition of Crosstalk (C_T)

$$\text{Crosstalk Modulation Ratio}(D_{SHA}) = \frac{|Y_A - Y_B|}{Y_A} \times 100 (\%)$$

※ $Y_A, Y_B = 2^\circ$ Viewing Angle (Measurement Area on Panel : $\phi 12\text{mm}$)

※ Background expect Black bar = Gray 1 ~ 63

① Horizontal Crosstalk

② Vertical Crosstalk

6.2 User Controls

- * Power: Turn on and off the monitor power.
- * Menu: Calls OSD menu and select the function to be adjusted.
- * Auto: Activates "Auto adjustment is being process".
- * Exit/Source
 - ☞ Exit from the OSD function or Back to previous menu.
 - ☞ Selects input signal source by press directly without OSD menu.
- * Up/Down
 - ☞ Moves the selector up and down on the OSD menu.
- * Left/Right
 - ☞ Moves the selector left and right on the OSD menu.
 - ☞ Increase or decrease the value of selected adjustment or Select proper setting.
- * Brightness: Adjust the brightness of back light lamp by press the Left/Right buttons without OSD menu. (Hot key)
- * LED: Indicates the status of monitor operation.
 - ☞ Green: Normal
 - ☞ Black: Power OFF
 - ☞ Amber: Power saving mode or Disconnection of signal cable.

7. Microprocessor

* Mode Detection

The microprocessor has to recognize the input signal mode automatically once input signal comes from the signal source, and then has to optimize the display adjustment accordingly integrated auto adjustment procedure.

If microprocessor finds out the input mode from NVRAM, all register sets will be initialized with this latest values, but microprocessor has to optimize all register sets with pre-set values if it does not exist on NVRAM.

* Auto Adjustment

When user activates the auto adjustment function by pressing AUTO button, the microprocessor will optimize all display adjustment sets such as video offset, gain, position, phase, and frequency automatically according to pre-programmed auto adjustment program.

* Manual Adjustment

If the microprocessor does not optimize all adjustments successfully, the manual adjustment will allow the correction of image adjustment along with OSD functionality. This adjustment has to be described in the user manual correctly.

* Saving Adjustment

The microprocessor manages to save all adjustment results automatically into external NVRAM when adjustment is finished.

* Out of Range

The microprocessor has to manage all input signals to figure out the data identification. If the input signal is out of permitted frequency, the microprocessor has to protect all circuitry to avoid any electrical problem, and then has to display the warning message according to pre-programmed message like "Please re-configure the display timing of your system".

But, it will not allow to enter DPMS mode.

This system will judge the input signal as follow the below;

☞ Horizontal frequency: <28KHz, >70KHz

☞ Vertical frequency : <54Hz, >86Hz

* Display Mode (Normal and Fail-Safe mode)

If the input signal is in the permitted frequency range as below, it will be operated in normal mode.

☞ Normal mode

→ Horizontal frequency : 30-61KHz

→ Vertical frequency : 55-76Hz

But, if the input signal is higher than normal input frequency, it will be converted into FailSafe mode with gray converted image to allow reconfiguration of monitor setting using Windows control panel menu. This functionality will minimize the installation failure by end-user.

☞ FailSafe mode

> Horizontal frequency : 62-69KHz

> Vertical frequency : 77-86Hz

*** Brightness Adjustment**

The system has two kinds of brightness adjustment modes as below;

☞ Normal operation: The brightness of backlight has to be adjusted by pressing designated key.

☞ *Smart Inverter Control™*: This function allows the system to adjust the brightness of back light automatically in conjunction with the quantity of the input data

using embedded digital processing logic when this mode is activated.

User can set this mode in OSD menu.

*** Power Management**

This system's power management protocol follows VESA DPMS compliance in section of 2.5.3 "Power management", but it has to be managed along with the below horizontal and vertical frequency guide line to identify the sync signal status.

☞ Stand-by mode: Horizontal frequency < 10KHz, Vertical frequency > 40Hz, maintain more than 3 seconds.

☞ Suspend mode: Horizontal frequency > 10KHz, Vertical frequency < 40Hz, maintain more than 3 seconds.

☞ Power-off mode: Horizontal frequency < 10KHz, vertical frequency < 40Hz, maintain more than 3 seconds.

*** Factory Reset**

One designated key allows to reset all data sets into factory preset values. But, it is not allowed to get the previous user set status after this function is finished.

The system has to have this factory preset values prior to shipment to our customer.

*** DDC (EDID)**

This system has one dedicated DDC ROM on the circuitry board. The final monitor system company can installed the EDID data as refer to attachment 2 "EDID Specification" into this ROM through the serial port of VGA connector.

8.2 Packing Information

8.2.1 Carton (Internal Package)

8.2.1.1 Packing Form: Corrugated fiberboard box and corrugated cardboard as shock absorber.

8.2.1.2 Packing Method

- NOTE 1) Acceptance number of piling : 10sets
2) Carton size :450(W) X 348(D) X 440(H)
3) MAX accumulation quantity : 4 cartons

8.2.1.3 Unless LCD Module are 10ea at one packing_case

* Unless LCD module are 10EA at one packing-case.

- > 1) Put in some LCD module in the direction of one.
 2) Try addition PAD CUSHION(2EA) in the next position.

ex) LCD module are 5EA in case.

* PAD CUSHION size
 (LT140X1/LTM150XS MODEL)
 : 250(W) x 330(H) x 20(T)

8.2.1.4 Packing Material

No	Part name	Quality
1	Static electric protective sack	10
2	Packing case(Inner box) included shock absorber	1 set
3	Pictorial marking	2 pcs
4	Carton	1 set

9. GENERAL PRECAUTION

9.1 Handling

- ☞ When the module is assembled, It should be attached to the system firmly using every mounting holes. Be careful not to twist and bend the modules.
- ☞ Refrain from strong mechanical shock and / or any force to the module. In addition to damage, this may cause improper operation or damage to the module and CCFT back-light.
- ☞ Note that polarizers are very fragile and could be easily damaged. Do not press or scratch the surface harder than a HB pencil lead.
- ☞ Wipe off water droplets or oil immediately. If you leave the droplets for a long time, Staining and discoloration may occur.
- ☞ If the surface of the polarizer is dirty, clean it using some absorbent cotton or soft cloth.
- ☞ The desirable cleaners are water, IPA(Isopropyl Alcohol) or Hexane. Do not use Ketone type materials (ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanent damage to the polarizer due to chemical reaction.
- ☞ If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth . In case of contact with hands, legs or clothes, it must be washed away thoroughly with soap.
- ☞ Protect the module from static , it may cause damage to the CMOS Gate Array IC.
- ☞ Use finger-stalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.
- ☞ Do not disassemble the module.
- ☞ Do not pull or fold the lamp wire.
- ☞ Do not adjust the variable resistor which is located on the back side.
- ☞ Pins of I/F connector shall not be touched directly with bare hands.

9.2 Storage

- ☞ Do not leave the module in high temperature, and high humidity for a long time.
- ☞ It is highly recommended to store the module with temperature from 0°C to 35°C and relative humidity of less than 70%.
- ☞ Do not store the TFT-LCD module in direct sunlight.
- ☞ The module shall be stored in a dark place. It is prohibited to apply sunlight or fluorescent light during the store.

9.3 Operation

- ☞ Do not connect,disconnect the module in the Power On condition.
- ☞ Power supply should always be turned on/off by the item 6.5 ? Power on/off sequence?
 - ☞ Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may

be important to minimize the interference.

- ☞ The cable between the back-light connector and its inverter power supply shall be a minimized length and be connected directly. The longer cable between the back-light and the inverter may cause lower luminance of lamp(CCFT) and may require higher startup voltage(Vs).

9.4 Others

- ☞ Ultra-violet ray filter is necessary for outdoor operation.
- ☞ Avoid condensation of water. It may result in improper operation or disconnection of electrode.
- ☞ Do not exceed the absolute maximum rating value. (the supply voltage variation, input voltage variation, variation in part contents and environmental temperature, so on) Otherwise the module may be damaged.
- ☞ If the module displays the same pattern continuously for a long period of time, it can be the situation when the image Sticks to the screen.
- ☞ This module has its circuitry PCB on the rear side and should be handled carefully in order not to be stressed.
